

DENTAL CLINICAL QUALITY REVIEW

The Director of Dental Services and/or Assistant Directors of Dental Services will conduct a dental clinical/peer review at least once per year using:

1. OHS clinical quality review dental health administrative instrument
2. OHS clinical quality review dental health clinical instrument

An exit briefing will be held with the Senior Dentist and other staff members (as deemed appropriate) at the conclusion of the dental clinical quality review.

The completed dental clinical quality review instruments will be forwarded to the respective regional Health Services office for incorporation into an overall institutional Health Services report.

Items requiring corrective action will be monitored through institutionally developed quality management performance indicators.
